Do not write below this line.

Attempt all the questions. Do not solve on the question paper. DO NOT change the actual Question Numbers. You may spend about 50 – 55 minutes for each part.

PART A: CLO 3: Present professional oral presentations.

1. Inaccurate and distorted perceptions of others significantly alter the communication process. Since this process is highly complex and requires strong efforts to reach certainty, we often end up at having distorted perceptions about people. To enhance communication competency, propose and enlist five strong guidelines to improve perception of others and their messages. Elaborate each with one specific example. Avoid generic content points. [5+5=10]
2. Listening is "the most widely used daily communication activity" (Janusik & Wolvin, 2009, p. 115). Identify different types of listening with their purposes and give one strong example for each to support your answer. In addition, construct one effective strategy to improve each type of listening. [10]
3. To prepare and deliver effective, professional-looking, memorable presentations, which guidelines will you follow to clarify and integrate your message to the audience? Illustrate with specific examples. [10]

PART B: CLO 4: Identify workplace conflict and resolution strategies.

4. Describe the steps involved in systematic problem-solving process. Provide one specific example for each of the steps that you elaborate. [10+5=15]
5. **Case Study:** A multinational tech company, Greens Inc., formed a project team with members from the U.S., Germany, Pakistan, China, and Brazil. Early in the project, cultural differences led to communication problems. U.S. and German members preferred direct, fast-paced discussions. In contrast, Chinese and Pakistani members used more indirect communication so that group harmony stays prioritized. Brazilian members emphasized relationship-building and informal exchanges. Tensions arose when the German team leader grew frustrated with what he saw as delays and unclear responses. The Chinese team members felt uncomfortable with the blunt tone used in meetings, but they did not express themselves

openly and clearly. Productivity dropped, and conflicts increased. To address this, the project manager organized intercultural workshops, set shared communication norms, and introduced active listening practices. These efforts gradually improved team understanding and cooperation. [10+5=15]

i. Analyze the main reason(s) for the conflict(s) in the team. How did communication styles of these countries create misunderstandings?

ii. Evaluate how effective the project manager's actions were in resolving the conflict(s).

PART C: CLO 5: Demonstrate job seeking and interview skills.

6. Justify through examples what is considered appropriate and inappropriate behavior during a job interview. Use specific terms and explanations to validate your answer. [10]
7. Elaborate 'Communication Orientation Motivation (COM)' technique to overcome public speaking anxiety. Use a strong example to support your answer. [10]
8. Assume that you are going to interview an applicant for the following job advertisement. Based on the job requirement, propose and write down ten questions from the below given interview protocols that can be asked from the candidate. [10]
 - One primary and One secondary question
 - One open-ended and One closed question
 - One neutral and One leading question
 - One behavioral question
 - Three technical questions

Power Engineer Intern - Fresh Graduate. Location: Lahore.

Job Description:

We are looking for a highly motivated Power Engineer Intern to join our team. This internship offers an excellent opportunity for recent graduates or students to gain practical experience in the field of electrical engineering, focusing on power systems, energy distribution, and infrastructure. You will work alongside experienced engineers to support ongoing projects, analyze system data, and help with problem-solving.

Key Responsibilities:

- Assist with the design and analysis of power distribution systems.
- Support engineers with power system simulations and testing.
- Help conduct site visits and inspections to assess system performance.
- Contribute to the development and improvement of engineering processes.
- Assist with the preparation of technical reports and documentation.
- Perform research and gather data on emerging technologies in power engineering.
- Provide general support to the engineering team as needed.
